

"We've Got Your Back"

Roughly 3 million rear end collisions occur in the U.S. each year, injuring more than 1.5 million people and costing \$15 billion in property damages. Did you know that a study done by The National Transportation Safety Board determined that "if following drivers had *just .05 to 1 second of additional warning time, that 60% - 90% of rear end collisions could be avoided*"? (NTSB Special Investigative Report SIR-01/01). Increase your drivers' safety and visibility while avoiding costly damages with a StrobeWise™ module and a bright LED Amber warning light which ***provides up to 10 seconds of additional warning time for following drivers.***

How StrobeWise operates: during the time while the vehicle is decelerating, even before braking, StrobeWise™ flashes to following drivers with a rear mounted supplemental Amber LED lights. Rate of flash varies relative to the degree of deceleration and flashes continuously while the vehicle is stopped. Microprocessors accurately measure the vehicle's speed at nearly 1,000 times/second and is the only collision warning system on the market to use the vehicle's speed sensor data.

StrobeWise™ retrofits on nearly all vehicles ('93 & newer). Four LED light options available with black, white or chrome housings to complement your vehicle. Call or click today for more information, 1.800.338.7337 or www.soundoffsignal.com/strobewise.htm.

StrobeWise®

Next Generation Vehicle Safety

For use with StrobeWise™ Module.
Chrome GHOST™ Surface Mount Light* mounted on semi trailer, #ESW110SCA.

For use with StrobeWise™ Module.
White Predator™ Surface Mount Light mounted on a Heil tanker, #ESW140SWA.

StrobeWise™ module accurately gauges braking & deceleration by connecting to the vehicle's speed sensor.

GHOST™

GHOST Mini Light #ESW120SBA
